In our country, the main culprit that is influencing people's attitudes toward mental illness is the stigma associated with mental disorders, which is rooted deep in the cultural beliefs and myths about mental disorders and that result in people avoiding association with individuals who suffer from mental illness as well as their families. Furthermore, untreated mental disorders may produce negative health consequences. Stigma can manifest in different forms, such as fear, bias, embarrassment, rejection, and avoidance. It worsens the experience of having a mental disorder by becoming a barrier that holds people and their families back from seeking professional help. Some people are embarrassed by individuals with mental disorders. Cultural beliefs, myths, and misconceptions about mental disorders develop negative attitudes toward mental disorders and those who suffer from it. As a result of negative opinions about mental disorders, individuals tend to self-stigmatize, which results in either not seeking professional mental health care or hindering the treatment and recovery of the person with a mental disorder.

According to the study of the data we have collected since past 10 years, it is seen that individuals with mental disorders not only experience stigma and social rejection but they and their families also face employment, economic, social, and education marginalization. Most of the trauma survivors perceive their mental dysfunction as karma of a past life. Some people associate psychological distress with bad karma. The trauma survivors perceived the sufferings and psychological trauma as bad karma and avoided seeking mental health service because of the stigma associated with revealing their bad karma. People believe that God was punishing those suffering from mental health for their past sins. People attribute illness as results of “black magic”. Another prevalent misconception in India is that mental illness is due to the patient 'not getting married at proper age', and that marriage will cure his/her sexual frustration or problem and thereby cure his/her mental illness. The stigmatization of individuals who are going through psychological distress creates hurdles for people from seeking mental health care; as a result, they may tend to seek help from traditional healers. Some people may visit a general physician for help because it is not as stigmatizing as it is to see mental health professionals. These individuals and their families turn to mental health services as a last resort. There have been many cases where some families have even registered patients under false names at our hospital / clinic to remain anonymous.
In India, a substantial number of patients suffering from severe mental disorders seek non-professional care. In the present study, for psychiatric illness, most cases contacted faith healers as the primary helping agency. A study on the treatment of psychiatric disorders in India observed that in view of the paucity of facilities, 80% of the population had to depend on indigenous treatments consisting of religious treatments consisting of prayers, fasting, and so on, as also various witchcrafts and magical rituals. The situation is more or less the same even today, and not surprisingly 68.5% of the cases in our study contacted faith healers as the primary helping agency. Although, the ancient wisdom may have some role in the treatment of mental disorders, there is a need for generating awareness in the psychiatric patients in India to get professional help. Psychiatric patients used to go through different traditional and faith healers, including indigenous methods of exorcism, before arriving to proper care. This caused a delay in presentation, which was largely attributable to the stigma associated with such illnesses, which in turn, led to suffering, and affected the outcome. When after being tortured by the non-professional helping agencies, the patients avoid the illness and after few months, the symptoms relapse, the psychiatric treatment is then taken as a last resort when all other treatments had failed.

Yoga is a group of physical, mental, and spiritual practices or disciplines which originated in ancient India. Yoga in Indian traditions, however, is more than physical exercise; it has meditative and spiritual core. One of the six major orthodox schools of Hinduism is also called Yoga, which has its own epistemology and metaphysics, and is closely related to Hindu Samkhya philosophy. It is a meditative means of discovering dysfunctional perception and cognition, as well
as overcoming it for the release from suffering, inner peace and salvation. It is the raising expansion of consciousness from oneself to being coextensive with everyone and everything. Yoga is a workout for not only our body, but for our mind and emotions, as well.

With the modern world being as hectic as it is, the fact that most people live sedentary lives only increases the buildup of stress in the mind. Practicing yoga for just a few minutes can rid our body and mind of the stress that has accumulated throughout our day. Yoga is one of the best ways to calm a disturbed mind and bring ourselves to a place of peace.

When practicing yoga, because your attention is focused on the most present parts of yourself (your body and breath), you create a state of increased of awareness, which brings the mind to the present state moment, where it can stay happy and focused. When your mind is relaxed, happy and content, you are better able to be present for others and sensitive to your own behaviour and how it affects those around you. Yoga and meditation help to maintain a happy and positive state of mind and those effects extend out to your ability to listen, be attentive and have compassion.

Om is considered to be one of the most important sounds in all the universe and has been chanted for thousands of years. It’s believed that continuous practice leads to profound enlightenment. Chanting of the Om Mantra purifies the environment around you and creates positive vibrations, your concentration increases and helps you focus, gives you better immunity and self-healing power, place you in a meditational state which gives you deep relaxation.

Meditation is a habitual process of training your mind to focus and redirect your thoughts. You can use it to increase awareness of yourself and your surroundings. Many people think of it as a way to reduce stress and develop concentration. People also use the practice to develop other beneficial habits and feelings, such as a positive mood and outlook, self-discipline, healthy sleep patterns and even increased pain tolerance.

Sun Salutation or Surya Namaskar is a Yoga warm up routine based on a sequence of gracefully linked asanas. The nomenclature refers to the symbolism of Sun as the soul and the source of all life. One of the primary Surya Namaskar benefits is that it strengthens the entire body. Stimulates the nervous system including the brain, lower plexus, spinal cord, etc. Surya Namaskar Yoga strongly aids in preventing memory loss, builds focus and concentration, improves the functioning of the brain. Activates Brain cells in the body. Improves mental and physical balance of the person’s body. Develops patience and builds stamina by increasing the mental capacity of the brain and the body. Most of all, it fills you up with magnanimous positive energy. You feel rejuvenated and alive.
Your brain is a marvelous organ capable of doing the unbelievable. Protecting its sanity and well-being should be the top priority. Many factors degenerate the brain, allowing psychiatric disorders to set in. To avoid this, strengthen and maintain your brain’s capabilities by practicing the following 5 yoga poses.

**Mahanratri Pranayama (Humming Bee Breathing)**
Step 1 - Sit straight in the Padmasana or Sukhasana and press your ear point with your thumb.
Step 2 - Place your index fingers on the forehead and with the remaining fingers close your eyes.
Step 3 - Inhale through both the nostrils deeply and slowly.
Step 4 - By keeping mouth close, exhale by making a humming sound bee like “humnum”.

- Releases negative emotions like anger, agitation, frustration, and anxiety.
- Improves concentration and memory.
- Builds confidence.

**Paschimottanasana (Seated Forward Bend)**
Stretches the spine, helps relieve stress.
- Releases the mind by removing negative emotions like irritability and anger.

**Suni Mandhushana (Bridge Pose)**
Strengthens and stretches the neck and spine.
- Release tight muscles.
- Improves blood circulation to the brain.
- Helps relax the brain and the nervous system, thereby reducing anxiety, stress, and depression.

**Sarvangasana (Shoulder Stand)**
- Regulates and normalizes the functions of thyroid and parathyroid glands.
- Nourishes the brain as more blood reaches the pineal and hypothalamic glands.
- Helps improve all digestive functions.

**Halasana (Plow Pose)**
- Helps improve blood flow to the brain and relax the nervous system.
- Stretches the back and neck, reducing stress and fatigue.

These 5 yoga poses are the best form of exercises that improve brain function. Stress and anxiety can cause your brain to malfunction, and that is what yoga can help avert.

These 7 yoga poses can regulate the vagus nerve that deals with your body’s mood and stress levels.

In India, out of 1.324 billion population, only 10 million people consult psychiatrists. Out of that, 15,000 people come to Dr. R.K. Thukral’s Omnicare House for treatment per year. To those 15,000, the types of treatment which we provide are given below along with the effects of spiritual treatment which we provide to the patients.
Methods of treatment provided to the patients at Omnicare House

- Traditional medicines only: 70%
- Counselling sessions and CBT along with medication: 15%
- Other methods: 10%

Effect of spiritual methods

- Medicines have reduced: 80%
- Symptoms reduced with minimal medicines: 10%
